

Genenta Science to present at **NUO Capital** Event in Hong Kong, **BioCentury** Healthcare Summit in Shanghai, and at **Jefferies** London Healthcare Conference

November 05, 2019

MILANO (Italy) / NEW YORK (NY, USA) -- Genenta Science, a clinical-stage biotechnology company pioneering the development of hematopoietic stem cell gene therapies for cancer (Temferon™), today announced that the Company is scheduled to present at:

- NUO Capital Event in Hong Kong on Nov 12 at 9am-2.30pm, Rosewood Hotel;
- BioCentury Healthcare Summit in Shanghai on Nov 19 at 5.15pm, Jing An Shangri-La Hotel;
- Jefferies Healthcare Conference in London on Nov 20 and 21, Waldorf Hilton Hotel.

About Genenta Science

Genenta (www.genenta.com) develops an ex-vivo gene transfer strategy into autologous hematopoietic stem/progenitor cells (HSPCs) to delivery immunomodulatory molecules directly via tumor-infiltrating monocytes/macrophages (Tie2 Expressing Monocytes - TEMs). Genenta's proprietary product is Temferon™.

The targeted expression of the immunomodulatory molecule in TEMs is achieved combining a transcriptional and post-transcriptional microRNA-mediated control. Thanks to these mechanisms, TEMs become capable to express the immunomodulatory molecule (Interferon-alpha, "IFN-α") in the tumor microenvironment.

TEMs are endowed with a pro-angiogenic activity and are spontaneously and actively recruited by developing tumors to sustain their growth. Thanks to the immune-gene transfer, TEMs become the tool for the local delivery of the immunomodulatory molecule. In the preclinical models, the local IFN-α release triggered both a direct (anti-angiogenic, pro-apoptotic) and an indirect anti-tumor effect (immune response).

In contrast to antigen-restricted Chimeric Antigen Receptor T cells (CAR-T), Temferon™ may reach not only hematologic disorders but more importantly, also solid tumors. In addition, its immune-modulatory functions may trigger a long-lasting immune response towards multiple tumor antigens.

As a result, Temferon™ should be able to break the tumor immune-tolerance by reprogramming the tumor immune microenvironment.

Genenta obtained the regulatory approvals for two Phase I/II clinical trials in early relapse Multiple Myeloma patients after front line therapy and newly diagnosed Glioblastoma Multiforme patients.

Genenta's headquarter is in Milano (Italy) and Genenta has an office in Alexandria Center's LaunchLabs, New York (NY, USA). The Company is part of Assobiotec, Italia StartUp, and ELITE (London Stock Exchange Group).

Co-founders: Pierluigi Paracchi, Ospedale San Raffaele (OSR), prof. Luigi Naldini (Director SR-TIGET, San Raffaele Telethon Institute for Gene Therapy), and Bernhard Gentner (Hematologist and Physician-Scientist at OSR and SR-TIGET). Carlo Russo, MD serves as CMO.

Genenta raised more than €30M in three different rounds of financing.
